ASLAM SYAHPUTRA

Tangerang, Banten, Indonesia | aslamsyahputra20@gmail.com | +62 812-6020-0867 | linkedin.com/in/aslam-syahputra-16b341189

Electrical Engineer with hands-on experience in **solar PV system design**, **electrical testing**, and **IoT instrumentation**. Delivered **400+ kWp** rooftop solar projects: **design verification**, **inverter configuration**, **functional testing**, and **commissioning** across residential, commercial, and rail (Depo KAI) clients. Developed **IoT** irradiance monitor using **ESP32** and **pyranometer**, validated **NASA POWER** data. Skilled in technical documentation and cross-functional collaboration.

EDUCATION

Universitas Sultan Ageng Tirtayasa (Untirta) **2019 – 2026**

Bachelor's Degree Electrical Engineering, IPK 3.20

- Design and Development of a Solar Irradiance Monitoring System Using the MS-601F Pyranometer for Analyzing Solar Irradiance Potential at the Faculty of Engineering Campus, Universitas Sultan Ageng Tirtayasa: Designed and built an **IoT-based solar irradiance monitoring system** using an EKO MS-601F **pyranometer**, **ESP32** microcontroller, and ADC ADS1115 to measure solar energy potential. Acquired 1,271 primary data samples (11 Mar – 10 Apr 2026), recorded peak irradiance of **811 W/m²**, and validated field data against **NASA POWER** satellite to accurately analyze local microclimate fluctuations.

WORK EXPERIENCE

PT Bersinar Energi Nusantara - Cilegon, Banten, Indonesia **Agt 2023 – Apr 2025**

Solar PV Installation Intern · Internship

- Supported delivery of **300+ kWp** rooftop solar PV projects for commercial and residential clients in partnership with Sunterra.
- Contributed to **273 kWp** residential installation at Layton NavaPark BSD and **55 kWp** commercial installation at PT Festo.
- Performed **electrical testing**, **inverter configuration**, and **functional commissioning** ensuring compliance and safety.
- Managed **quality control**, technical documentation, and on-site coordination throughout project lifecycles.

Himpunan Mahasiswa Elektro (HME) Universitas Sultan Ageng Tirtayasa - Cilegon, Banten, Indonesia **2021 – 2022**

Chairman, Electrical Engineering Student Association (HME) · Student Organization

- Led the **Electrical Engineering Student Association**, directing strategic initiatives for hundreds of students.
- Coordinated cross-functional teams and served as liaison between faculty and students for academic events.
- Promoted technical competitions, seminars, and community projects, enhancing engineering community engagement.

PROJECT EXPERIENCE

PT Kereta Api Indonesia (Persero) Rooftop Solar PV Installation **2025** · 1 Month

Renewable Energy | Site Management, Inverter Configuration, Testing, Commissioning, BAPP

- Executed **80 kWp** rooftop solar PV installation across Depo KAI Simpang and Prabumulih, managing site teams and project schedule.
- Performed **electrical testing**, **inverter configuration**, and **commissioning**, validating system performance and safety standards.
- Authored technical handover documentation (BAPP) for official project acceptance.

Layton NavaPark Residential Solar PV Installation **2024** · 1 Year

Renewable Energy | Residential PV, Site Coordination, Quality Control

- Contributed to installation of a **273 kWp** residential rooftop solar PV system at Layton NavaPark BSD.
- Assisted in **electrical wiring**, module mounting, and **site quality checks** to ensure design conformance.
- Coordinated daily operations with installers, project manager, and client to meet milestones.

PT Festo Commercial Solar PV Installation **2023** · 1 Months

Renewable Energy | Commercial PV, Installation Support, Technical Documentation

- Supported the **55 kWp** commercial rooftop PV installation at PT Festo, assisting in **system assembly** and **electrical connections**.
- Monitored **quality assurance** at site, ensuring installation followed technical specifications and safety protocols.
- Prepared daily progress updates and as-built documentation for project handover.

IoT Solar Irradiance Monitoring System Using Pyranometer MS-601F **2026** · Final Year Project

IoT / Instrumentation | ESP32, Pyranometer, IoT, Data Acquisition

- Designed an **IoT-based monitoring system** using **ESP32** microcontroller, ADS1115 ADC, and EKO MS-601F **pyranometer** for solar energy assessment.
- Acquired **1,271** samples over a month, recording peak irradiance of **811 W/m²**, and validated data against **NASA POWER** satellite.
- Delivered technical report and demonstrated system reliability for solar site analysis.

Technical: ESP32, IoT Systems, Pyranometer, Inverters, Solar PV System Design, Electrical Testing & Commissioning, Quality Control, Data Acquisition, Technical Documentation

Soft Skills: Strategic Planning, Team Leadership, Cross-functional Communication, Stakeholder Management, Problem Solving
